Project Name: Gold Car Polish Website (Web and Mobile Responsive)

Company: Gold Car Polish (car services and training), Yangon

Design: Final Index Page Demo Design for Development

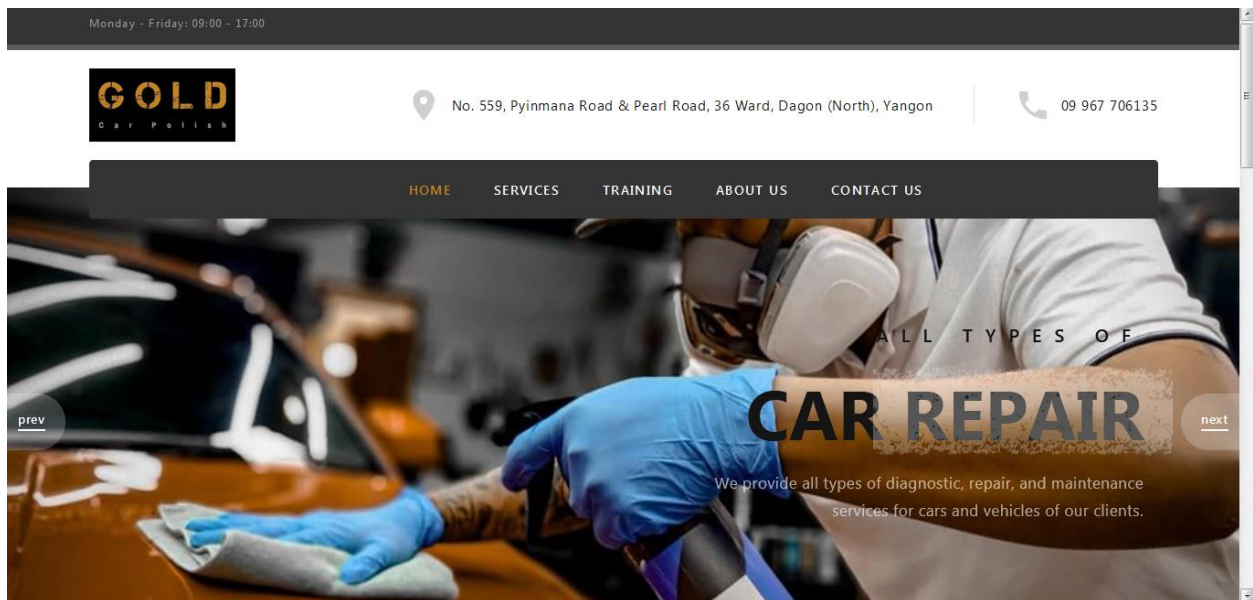

Tools: Code Editor (html,css) , Photoshop (images,logo)

Process: User and business requirements, Research, Wireframes, Designed index page, Showed demo design to client, Redo or Confirm demo design.

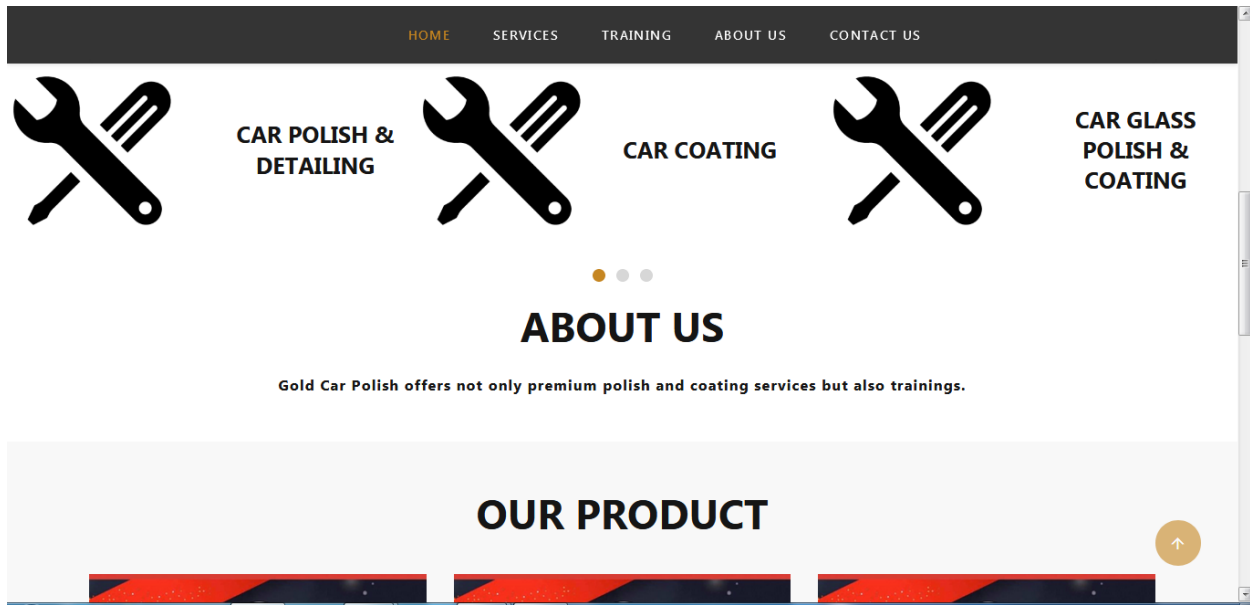

G-C-P does not have website. They were operating business with social media (mainly facebook). So I did research of business, target customers, business needs, what we can do according to the website plan the company chose and worked around it. Basically process worked in iteration. G-C-P chose plan A website (only template) with less feature. We made design brief since this is their first website. After research, wireframe and meetings, we chose one suitable template, fixed according to demo sketch and wireframe. After all the demo page is confirmed, development of other features and pages began.

Images and Information copyright Gold Car Polish

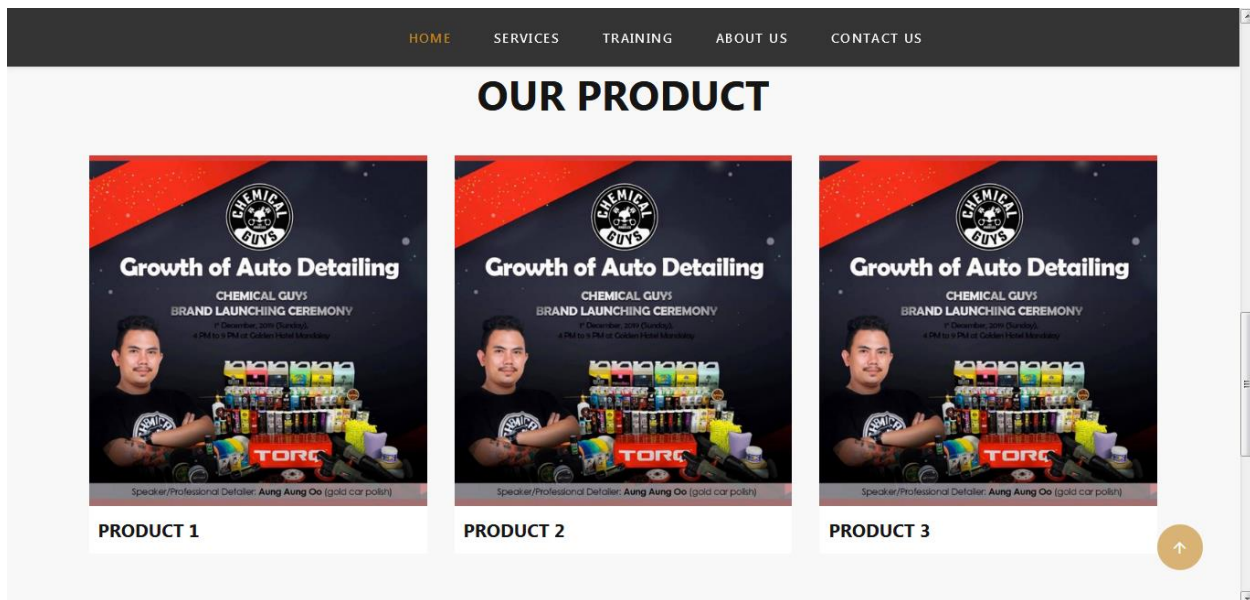

According to the policy, I did not share details of steps like paper sketches, wireframe, final developed designs and more of the business (client).
